

# TABEL KOMPOSISI PANGAN INDONESIA

KEMENTERIAN  
KESEHATAN  
REPUBLIK  
INDONESIA

KEMENTERIAN KESEHATAN  
2020

## SAMBUTAN MENTERI KESEHATAN RI

Upaya perbaikan gizi dapat dilakukan dengan memperbaiki pola konsumsi pangan masyarakat. Salah satu instrumen yang diperlukan sebagai dasar perencanaan pangan dan evaluasi konsumsi pangan serta asupan gizi yaitu Data Komposisi Pangan yang dapat memberikan informasi kandungan zat gizi pangan dari berbagai daerah di Indonesia. Data

Komposisi Pangan ini dapat digunakan baik oleh akademisi, organisasi profesi, nutrisionis, masyarakat umum maupun bagi pemegang kebijakan.

Data Komposisi Pangan terstandar dan dapat mewakili data nasional yang lengkap dan akurat sangat diperlukan, agar masyarakat memiliki cukup informasi dalam memilih dan mengkombinasikan pangan sehat menurut kandungan gizinya.

Mengingat beragamnya pangan di Indonesia, data komposisi pangan perlu terus dilengkapi secara terintegrasi melibatkan berbagai sektor terkait. Untuk itu diharapkan peran serta berbagai balai penelitian dari lintas sektor/lembaga, perguruan tinggi dan Poltekkes di berbagai daerah dalam melakukan analisis zat gizi berbagai bahan pangan. Demikian pula untuk

kandungan gizi pangan olahan industri, peran BPOM sangat penting, karena perubahan gaya hidup menyebabkan perubahan pola konsumsi masyarakat dari makanan alami menjadi makanan jadi/olahan.

Saya sampaikan ucapan selamat dan penghargaan yang tinggi kepada PERSAGI dan semua pihak yang terlibat dalam pembaruan buku ini. Kontribusi bapak/Ibu sangat berarti dalam mendukung upaya perbaikan status gizi masyarakat dan percepatan pembangunan nasional bidang kesehatan selanjutnya.

## KATA PENGANTAR

Puji syukur kehadirat Tuhan YME, pada akhirnya Tabel Komposisi Pangan Indonesia (TKPI, 2009) dapat diperbarui. Pembaruan perlu dilakukan karena masih ada nilai gizi yang belum lengkap pada beberapa bahan makanan yang ada. Salah satu syarat Tabel Komposisi Pangan yang baik adalah memiliki nilai gizi yang lengkap, sehingga pada saat digunakan untuk menghitung asupan zat gizi individu atau kelompok hasilnya akurat. Selain itu, TKPI sangat dibutuhkan oleh sektor Pertanian dalam kegiatan ketahanan pangan, Institusi Rumah Sakit ataupun Klinik dalam penetapan diet pasien, sektor Industri dalam penetapan label makanan, dan sektor penelitian gizi dan kesehatan, dalam membantu memberi masukan kepada Pemerintah terkait kebijakan Gizi dan Kesehatan.

Proses pembaruan TKPI 2020 ini tidak merubah TKPI 2009, melainkan melengkapi nilai gizi yang belum ada dengan menggunakan metode *imputed* dan *borrowed values* untuk makanan tunggal/single, serta melakukan pengkodean dengan membedakan makanan non-olahan dan olahan. Diketahui bahwa jenis makanan yang ada di Indonesia semakin beragam dan berubah-ubah, seperti masuknya buah impor dan makanan pabrikan yang terus berkembang jenisnya. Selain menggunakan metode *imputed* dan *borrowed values*, nilai gizi bisa didapatkan melalui hasil analisis laboratorium, dan itu merupakan metode terbaik untuk pembaruan TKPI. Pembaruan TKPI harus

terus berlanjut dengan melengkapi nilai gizi makanan komposit termasuk makanan pabrikan, serta menambah bahan makanan baru beserta nilai gizinya.

Dalam kegiatan pembaruan TKPI ini, apresiasi diberikan kepada PERSAGI, tim penyusun dan semua pihak yang telah memberikan kontribusi teknis dalam proses pembaruan TKPI yaitu Pusat Penelitian dan Pengembangan Upaya Kesehatan Masyarakat-Balitbangkes, Pusat Penelitian dan Pengembangan Biomedis dan Teknologi Dasar Kesehatan-Balitbangkes, Lembaga Ilmu Pengetahuan Indonesia (LIPI), Badan Tenaga Atom Nasional (BATAN), dan Poltekkes Jakarta II. Ucapan terima kasih tidak lupa diberikan kepada FEMA-IPB dan Global Alliance for Improved Nutrition (GAIN), atas saran yang diberikan selama proses pelaksanaan dan sebagai sponsor kegiatan pembaruan TKPI ini.

Semoga TKPI hasil pembaruan ini dapat bermanfaat dan digunakan sebagai acuan atau pedoman pada penelitian gizi dan kesehatan. Kedepannya pembaruan TKPI akan terus dilakukan.

Penulis,  
Jakarta, 2020

## 1. PENJELASAN UMUM

### TABEL KOMPOSISI PANGAN INDONESIA

Upaya pengembangan data pada Tabel Komposisi Pangan Indonesia (TKPI) dilakukan dengan cara imputasi nilai gizi yang belum memiliki nilai atau masih kosong, dengan menggunakan metode *imputed values* dan *borrowed values* serta melakukan pemeriksaan ulang nilai gizi. Selain itu pada buku TKPI ini, terdapat penambahan bahan pangan baru yang bersumber dari data Badan Ketahanan Pangan (BKP), Kementerian Pertanian.

Proses imputasi nilai gizi pada TKPI mulai dari tahun 2009 hingga 2020, hanya untuk bahan pangan tunggal/single yang umumnya adalah bahan pangan mentah, sedangkan untuk pangan komposit belum ada penambahan dan pangan pabrikan belum dapat dilakukan. Pembaruan melalui imputasi nilai gizi untuk Tabel Komposisi Pangan sebaiknya dilakukan seminimal mungkin dan kedepannya proses pengembangan Tabel Komposisi Pangan Indonesia akan tetap terus dilakukan, terutama dengan menggunakan nilai analisis laboratorium.

TKPI 2009 digunakan sebagai dasar pengembangan TKPI 2020, merupakan kumpulan data komposisi zat gizi pangan yang ada di Indonesia, yang berasal dari laporan atau makalah hasil penelitian mengenai komposisi zat gizi pangan yang dilakukan di Pusat Penelitian dan Pengembangan Gizi dan Pangan, Departemen Kesehatan RI dan sumber lain, yaitu;

1. Lie Goan Hong dan Oey Kam Nio, 1964. Daftar Analisis Bahan Pangan. Lembaga Pangan Rakyat. Jakarta.

2. Mahmud Mien K, Dewi Sabita Slamet, Rossi R. Apriyantono, dan Hermana. 1990. Komposisi Zat Gizi Pangan Indonesia. Departemen Kesehatan R.I.
3. Mahmud, Mien K, Hermana, dan Rossi Rozanna. 1993. Komposisi Zat Gizi Pangan Siap Santap. Puslitbang Gizi, Balitbangkes, Depkes RI.
4. Mien Karmini, Hermana, Komari, Basrah Enie, Anton Apriyantono, Slamet Budiyanto, dan Rimbawan, 2001. Komposisi Zat Gizi Pangan Indonesia. Departemen Kesehatan RI. Pusat Penelitian dan Pengembangan Gizi dan Pangan.
5. Oei Kam Nio, 1992. Daftar Analisis Bahan Pangan. Universitas Indonesia. Jakarta.
6. Woot-Tsuen Wu Leung and Ritva Rananheimo and Flora Huang Chang. 1972. Food Composition Table UN. FAO. US Department of Health, Education and Welfare.

## 2. SISTEMATIKA TABEL KOMPOSISI PANGAN INDONESIA

### 2.1. Jenis dan Pengelompokan Pangan

Jenis pangan yang terdapat pada Tabel Komposisi Pangan ini, meliputi pangan tunggal/single dan olahan, yaitu:

- Pangan tunggal/single pada TKPI ini adalah bahan pangan yang tidak mengalami pengolahan dan tidak memiliki campuran bahan pangan lainnya termasuk garam dan minyak. Pangan tunggal/single biasanya terdapat dalam bentuk mentah atau segar atau masih dalam bentuk alaminya.
- Pangan olahan pada TKPI ini adalah bahan pangan yang telah mengalami proses pengolahan sehingga merubah bentuk alami bahan pangan. Bahan pangan olahan tersebut dapat berupa bahan pangan single/tunggal yang telah mengalami pengolahan seperti tepung terigu dan tepung beras atau pangan komposit/campuran seperti masakan, kue-kue, dan pangan pabrikan.

### 2.2. Pengelompokan Pangan

Pengelompokan pangan pada TKPI ini merujuk pada pengelompokan pangan yang dilakukan oleh Harmonisasi ASEAN berdasarkan jenis, karakteristik, bagian, dan fungsi pangan (Tabel 1).

Tabel 1. Pengelompokan Pangan

| BAHAN PANGAN |  |
|--------------|--|
| 1            | Serealis dan hasil olahannya             |
| 2            | Umbi dan hasil olahannya                 |
| 3            | Kacang, biji, benan, dan hasil olahannya |
| 4            | Sayur dan hasil olahannya                |
| 5            | Buah dan hasil olahannya                 |
| 6            | Daging, unggas, dan hasil olahannya      |
| 7            | Ikan, kerang, udang, dan hasil olahannya |
| 8            | Telur dan hasil olahannya                |
| 9            | Susu dan hasil olahannya                 |
| 10           | Lemak dan minyak                         |
| 11           | Gula, sirup, dan konfektioneri           |
| 12           | Bumbu                                    |
| 13           | Minuman                                  |

### 2.3. Sistematika Penamaan Pangan

Pada TKPI ini, penamaan pangan yang dicantumkan menggambarkan deskripsi bahan pangan antara lain adalah:

- Warna: kuning, merah, ungu, putih, dll.
- Proses pengolahan: panggang, goreng, bakar, dll.
- Kondisi: mentah dan segar.
- Bentuk: kering, bubuk, cair, dll.

Sistematika penamaan dilakukan dengan menuliskan secara berurutan mulai dari nama, jenis, bagian, warna, pengolahan, dan bentuk. Sebagai contoh, jagung kuning bakar dan jagung putih rebus.

Penamaan pangan yang tercantum adalah nama dalam bahasa Indonesia/lokal. Sedangkan nama dalam bahasa Inggris dan taksonomi (ilmiah) dicantumkan pada bagian indeks. Penamaan ilmiah dilakukan oleh staf Lembaga Ilmu Pengetahuan Indonesia (LIPI) Departemen Biologi. Identifikasi pemberian nama taksonomi memerlukan sampel atau foto bahan pangan, namun pada TKPI ini tidak tersedia. Sehingga memungkinkan bila terjadinya perbedaan.

#### 2.4. Sistematika Pengkodean Pangan

Sistem pengkodean berdasarkan abjad yang diikuti numerik dan mengacu pada sistem kode yang dilakukan oleh Harmonisasi ASEAN yang di modifikasi (Tabel 2). Alfabet pertama menggambarkan kelompok bahan pangan. Alfabet kedua merupakan perbedaan perlakuan terhadap bahan pangan (mentah/segar dilambangkan dengan huruf "R" atau olahan/proses dilambangkan dengan huruf "P"). Numerik (tiga digit) setelah alfabet digunakan untuk urutan bahan pangan pada masing-masing kelompok. Alfabet I, L, dan O tidak digunakan pada kode kelompok bahan pangan.

Tabel 2. Sistem Pengkodean Bahan Pangan

| BAHAN PANGAN   | KODE     |
|--|----------|
| 1 Serealia mentah<br>Serealia olahan   | AR<br>AP |
| 2 Umbi mentah<br>Umbi olahan   | BR<br>BP |
| 3 Kacang, biji, bean<br>Kacang, biji, bean olahan                            | CR<br>CP |
| 4 Sayur<br>Sayur olahan  | DR<br>DP |
| 5 Buah<br>Buah olahan  | ER<br>EP |
| 6 Daging dan unggas<br>Daging dan unggas olahan                              | FR<br>FP |
| 7 Ikan, kerang, dan udang<br>Ikan, kerang, dan udang olahan                  | GR<br>GP |
| 8 Telur<br>Telur olahan  | HR<br>HP |
| 9 Susu<br>Susu olahan  | JR<br>JP |
| 10 Lemak dan minyak<br>Lemak dan minyak olahan                               | KR<br>KP |
| 11 Gula, sirup, dan konfeksiioneri<br>Gula, sirup, dan konfeksiioneri olahan | MR<br>MP |
| 12 Bumbu<br>Bumbu olahan   | NR<br>NP |
| 13 Minuman<br>Minuman olahan   | PR<br>PP |

## 2.5. Sistematika Penulisan Zat Gizi/Komponen Pangan

Sistematika penulisan zat gizi berhubungan dengan INFOODS Tagnames dan mencantumkan kadar zat gizi per-seratus gram bagian pangan yang dapat dimakan (BDD). Pencantuman zat gizi tersebut disajikan dalam tabel 3 sebagai berikut:

Tabel 3. Sistematika Penulisan Zat Gizi

| ZAT GIZI/KOMPONEN PANGAN     | INFOODS TAGNAMES | SATUAN | ANGKA DEKIMAL |
|------------------------------|------------------|--------|---------------|
| 1. Air                       | WATER            | g      | 1             |
| 2. Energi                    | ENERG            | Kcal   | 0             |
| 3. Protein                   | PROCNT           | g      | 1             |
| 4. Lemak                     | FAT              | g      | 1             |
| 5. Karbohidrat (total)       | CHOCDF<br>FIBC   | g      | 1             |
| 6. Serat kasar/totol serat*) | FIBTG            | g      | 1             |
| 7. Serat pangan              |                  |        |               |
| 8. Abu                       | ASH              | g      | 1             |
| 9. Kalsium                   | CA               | mg     | 0             |
| 10. Fosfor                   | P                | mg     | 0             |
| 11. Besi                     | FE               | mg     | 1             |
| 12. Natrium                  | NA               | mg     | 0             |
| 13. Kalsium                  | K                | mg     | 1             |
| 14. Tembaga                  | CU               | mg     | 2             |
| 15. Seng                     | ZN               | mg     | 1             |
| 16. Retinol (vitamin A)      | RETOL            | mcg    | 0             |
| 17. $\beta$ -karoten         | CARTB            | mcg    | 0             |
| 18. Karoten Total            | CARTOL           | mcg    | 0             |
| 19. Thiamin (vitamin B1)     | THIA             | mg     | 2             |
| 20. Riboflavin (vitamin B2)  | RIBF             | mg     | 2             |
| 21. Niacin                   | NA               | mg     | 1             |
| Vitamin C                    | VITC             | mg     | 0             |

\*) Pada TKPI ini, data serat yang ada adalah data serat total dan serat pangan, namun masih belum dapat diidentifikasi dengan pasti bahan pangan yang mencantumkan serat total atau serat pangan.

## 2.6. Nilai Gizi Pangan

Nilai zat gizi yang tercantum pada Tabel Komposisi Pangan (2020) ini, merupakan nilai:

- a. Analytical value adalah nilai yang diperoleh dari analisis laboratorium.

Pada TKPI ini, metode analisis zat gizi yang digunakan dapat dilihat pada tabel 4 berikut ini:

Tabel 4. Metode Analisis Zat Gizi

| KOMPONEN PANGAN             | METODE ANALISIS                        |
|-----------------------------|--|
| 1. Air                      | Pengeringan dalam oven dan gravimetric |
| 3. Protein                  | Kjeldahl                               |
| 4. Lemak                    | Sosheit                                |
| 5. Karbohidrat              | Perhitungan                            |
| 6. Serat pangan             | Enzimatik dan gravimetric              |
| 7. Abu                      | Pemijaran                              |
| 8. Kalsium                  | AAS                                    |
| 9. Fosfor                   | AAS                                    |
| 10. Besi                    | AAS                                    |
| 11. Natrium                 | AAS                                    |
| 12. Kalsium                 | AAS                                    |
| 13. Tembaga                 | AAS                                    |
| 14. Seng                    | AAS                                    |
| 15. Retinol (vitamin A)     | HPLC                                   |
| 16. $\beta$ -karoten        | HPLC                                   |
| 18. Thiamin (vitamin B1)    | Spektrofotometri                       |
| 19. Riboflavin (vitamin B2) | Mikrobiologi                           |
| 20. Niacin                  | Spektrofotometri                       |
| 21. Vitamin C               | Titasi                                 |

- b. *Imputed value* adalah nilai gizi dengan cara memadankan jenis pangan yang sama atau serupa dari sumber literatur/rujukan lain, kemudian nilai gizi dihitung berdasarkan berat kering/solid. Pada Tabel Komposisi Pangan ini, *imputed values* diberi warna biru muda.
- c. *Borrowed value* adalah nilai gizi dengan cara memadankan jenis pangan yang sama atau serupa dari Tabel Komposisi Pangan negara lain, kemudian nilai gizi dihitung berdasarkan berat kering/solid. Pada Tabel Komposisi Pangan ini, *borrowed values* diberi warna biru muda.
- d. *Presumed value* merupakan data berdasarkan hasil asumsi. Misalnya pada daging tidak mengandung serat, maka diasumsikan nilai serat pada daging adalah "0" tanpa memerlukan analisis laboratorium untuk serat daging.

*Imputed* dan *borrowed values* ada pada beberapa pangan tunggal mentah dan yang mengalami proses pemasakan sederhana, seperti bakar dan rebus, tanpa memperimbangkan adanya penambahan garam dan bumbu yang dapat mempengaruhi kandungan natrium pada bahan pangan tersebut. Nilai gizi yang tidak dilakukan imputasi adalah vitamin C, karena analisis vitamin C pada TKPI masih menggunakan metode titrasi yang seharusnya diperbaharui dengan metode analisis HPLC. Nilai gizi serat juga tidak dilakukan imputasi, karena pada TKPI (2009) nilai serat yang tercantum bervariasi yang terdiri dari nilai

serat kasar dan serat makanan. Nilai gizi Retinol dan Karoten Total, juga tidak dilakukan imputasi.

Sistematika penentuan *imputed* dan *borrowed value* dapat dilihat pada "Pedoman Imputasi Nilai Gizi Tabel Komposisi Pangan Indonesia (tahun 2017)". Sumber rujukan yang digunakan untuk imputasi nilai gizi adalah:

Imputasi nilai Besi dan Seng, pada beberapa bahan pangan menggunakan rujukan hasil penelitian dari BATAN. Nilai gizi seng tepung terigu pada TKPI ini telah disesuaikan dengan nilai fortifikasi seng pada tepung terigu. Namun, untuk bahan makanan yang mengandung tepung terigu, nilai gizi seng belum mengalami penyesuaian.

## 2.7. Berat bahan yang Dapat Dimakan (BDD)

Kadar zat gizi disajikan per-100 g bagian yang dapat dimakan (*edible portion*). Contoh, kandungan protein ikan layang adalah 20 g/100 g berat ikan yang dapat dimakan. Berat ikan layang yang dapat dimakan adalah sebesar 80%, berarti dari 100 g ikan layang, yang dapat dimakan hanya sebesar 80 g, yaitu daging ikannya, tidak termasuk tulang, duri/sirip, kepala, dan ekor. Dengan demikian untuk mendapatkan 100 g berat ikan layang yang dapat dimakan, maka diperlukan ikan layang sebesar  $(100 \times 100) : 80 = 125$  g

Dengan melihat data BDD dapat diketahui, bahwa bahan pangan dapat dimakan seluruhnya atau hanya sebagian. Contoh, bila BDD buah sebesar 100%, berarti buah tersebut dimakan bersama kulitnya bahkan mungkin juga dengan bijinya.

Pada TKPI ini sebagian besar pangan sudah memiliki data BDD, yang diperoleh dengan cara menelusuri sumber asli komposisi bahan pangan yang bersangkutan. Hanya sebagian kecil BDD bahan pangan yang tidak dapat ditelusuri, sehingga harus meminjam data BDD bahan pangan yang sama dari *Food Database* negara di ASEAN. Namun, masih ada beberapa kendala dalam penentuan BDD, sehingga ada beberapa bahan pangan pada TKPI ini, yang belum memiliki data BDD.

## 2.8. Sumber Rujukan Bahan Pangan dan Nilai Gizi

Pada TKPI ini, ditambahkan kolom "Sumber", yang menjelaskan sumber rujukan bahan pangan beserta tahunnya.

## 2.9. Penjelasan Makanan Lokal/Daerah

Penjelasan makanan lokal/daerah dicantumkan pada bagian glosari. Penjelasan yang diberikan adalah mengenai beberapa pangan komposit (masakan dan kue) atau pangan lokal lainnya. Penjelasan yang diberikan berupa nama lokal dan komposisi bahan pangan pembentuk makanan tersebut atau proses pengolahannya. Beberapa penjelasan yang diberikan diperoleh dengan penelusuran melalui webbase.

## 2.10. Angka dan Tanda pada Daftar

Angka 0 (nol) berarti pangan tidak mengandung zat gizi atau sangat sedikit (trace) sehingga tidak terdeteksi saat analisis dilakukan. Sedangkan bila kolom nilai gizi kosong, berarti zat gizi pangan tersebut tidak dianalisa atau tidak memiliki data nilai gizi.

## 8. DAFTAR RALAT

Buku cetakan TKPI 2020 merupakan perbaikan dari buku TKPI 2017. Perbaikan yang dilakukan diantaranya mengenai:

- Konsistensi penulisan data yang belum tersedia, seharusnya kosong tidak diberikan tanda (-), namun pada TKPI 2017 masih beberapa bahan makanan tertulis (-).
- Pemberian warna biru pada data hasil borrowing.
- Perbaikan beberapa data zat gizi dan pemberian tanda biru sebagai makna hasil borrowing, diantaranya:
